

Espresso Course

Perfecto provides support for Espresso tests, allowing the execution to be extended from an emulator on the Developers laptop to execution on real devices in the cloud.

The Espresso course explains how to add Perfecto devices to your Espresso project, optimize performance and execute the tests from Jenkins.

Course Audience

The course is designed for teams which are familiar with Espresso and able to write Espresso tests independently **OR** testers who do not write Espresso automation themselves, but need to execute and track results only.

There is no need for any previous Perfecto experience.

Download and Use

Setup Guide -See the [Setup Guide](#) to get started.

Sample project - <https://github.com/PerfectoMobileSA/EspressoDemoApplication> This is the repository we will use throughout the course.
