

Espresso

Perfecto supports Espresso instrumentation tests integrating the whole process from your CI to Reporting. Use the [Perfecto Gradle plugin](#) to configure your tests to run on devices in Perfecto. You can either integrate the plugin with your Android project or execute the tests separately. Finally, the task will generate Smart Reporting [Single Test Reports \(STR\)](#) that allow you to analyze the full test suite.

In this section:

- [Run Espresso on Perfecto devices](#)
- [Install the Perfecto Gradle plugin \(Espresso\)](#)

For CI information, see [Integrate with Jenkins \(Espresso/XCUI Test\)](#).
