

# How to get along with the Status and History tabs in Reporting page of Perfecto

by Nato Vasilevski

If you have enabled the functionality for history tracking, described [here](#) and you are observing the results of your tests in the History and the Status tabs, this article is for you.

## Problem

You might have noticed at some point that the Status and the last test run show different results like this...:

	Status	History (Old → New)		Device model	Device ID
<a href="#">App_Andr...</a>				Samsung Galaxy S7	CE061606DC3...

... and you might be thinking that the Status of your test is failed, but you need to know that the History shows the same test on the same device over the last few runs and the Status - in certain point of the time.

## Solution

The reason the Status tab shows different result than the one of the last run is that you are observing the status of the particular test run – you can see that by looking the highlighted test is the one circled in the History tab:

	Status	History (Old → New)		Device model	Device ID
<a href="#">App_Andr...</a>				Samsung Galaxy S7	CE061606DC3...

The latest run in the sequence is to be found when you scroll further. This is indeed the current Status of your test:

	Status	History (Old → New)		Device model	Device ID
<a href="#">App_Andr...</a>				Samsung Galaxy S7	CE061606DC3...

If you notice something that is not right or needs to be discussed, do not hesitate to [tell us](#) about it.
