

# How to fix "Method is not implemented"

You can observe error like this one

```
org.openqa.selenium.WebDriverException: Method is not implemented
```

when you are running on iOS devices with different OS versions, because of the fact that UIAutomation is used for iOS 9.3 and below, and XCUITest for iOS 9.3 and up

So as soon as you see it, you can go to the part of the code where you are trying to find that element, and check the syntax you are using to find it.

It probably will look like:

```
driver.FindElementByXPath("//*[@label=\"0\"]");
```

This is the code you need to edit following the new syntax. The new line should look like that:

```
driver.findElement(By.xpath("//*[@label=\"0\"]"))
```
