

Codeless automation

Perfecto Codeless is the creation of AI-driven test automation that is based on [Selenium](#). You can use it to complement Selenium or to replace Selenium for test creation. Codeless enables all team members to quickly create stable test automation without needing to code and without having to spend time on maintenance, due to self-healing AI.

With Codeless, you can create tests on the fly or edit them on a canvas. If you need assistance, help is available directly in the UI. Short, precise articles walk you through any procedure in just a few steps.

To access the Codeless UI, see [Access and navigate the Perfecto UI landing page](#). Note that Codeless is currently only available in select clouds.

To access the documentation in the Codeless UI, click the question mark icon  at the bottom right. The Help Center opens in the right pane. Watch this short video to see how it works.

Your browser does not support the HTML5 video element
