View devices currently being tested

View and Monitor Multiple Devices

The Device Dashboard allows designated users to view multiple open dedicated devices, within their organization, in one window. This is a view only mode, device manipulations cannot be made. Rather, the purpose of this feature is to allow users to view devices currently being tested. This includes monitoring devices in both automation and interactive sessions.

This tool allows users to view exactly what is actually running on their devices, without the need to open the IDE or the execution center. In the "full auto pilot" mode, the displayed videos are dynamically replaced based on actual activities.

Note: The dashboard does not interfere with the actual device operation and cannot harm running scripts or interactive sessions running on the device.

Note: This feature is only available for dedicated devices.

To Open the Device Dashboard:

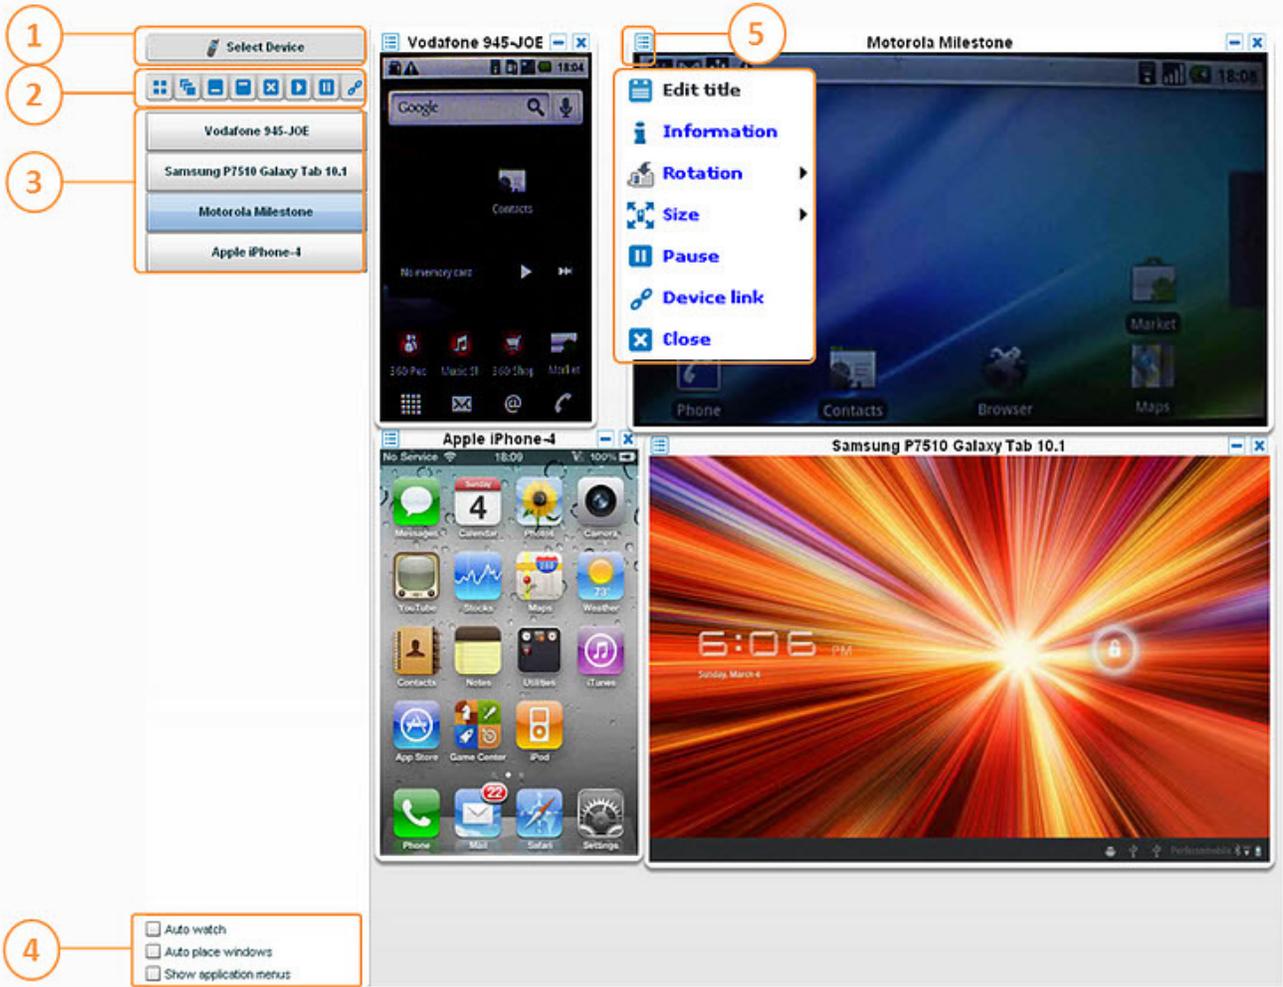

From the *More* menu, select *Device Dashboard*

NOTE: The *Device Dashboard* option is only available to users that are assigned the **HANDSET_VIEWER** [role](#).

To Open Devices:

- Click on *Select Device*
- Select multiple devices with CTRL and SHIFT

NOTE: If the dashboard is **not** enabled, please contact your system administrator.

1. Select Device
2. View Options
3. Device Details
4. Display Options
5. Device Menu

Device Dashboard Icons

Icon	Description
	Tile device windows across the screen
	Cascade device windows across the screen
	Minimize all open device windows
	Show all open device windows
	Close all open device windows
	Play all open device videos
	Pause video-stream of all open device windows, takes a digital snapshot of each screen.
	Create a link (as a bookmark or a reference) to watch the opened devices

Display Options

Auto watch - automatically opens up to 10 random dedicated device screens. When more than 10 devices exist, they will continuously be auto switched.

Auto place windows - automatically places open device windows across the screen. This may be useful when choosing the *Auto watch* option.

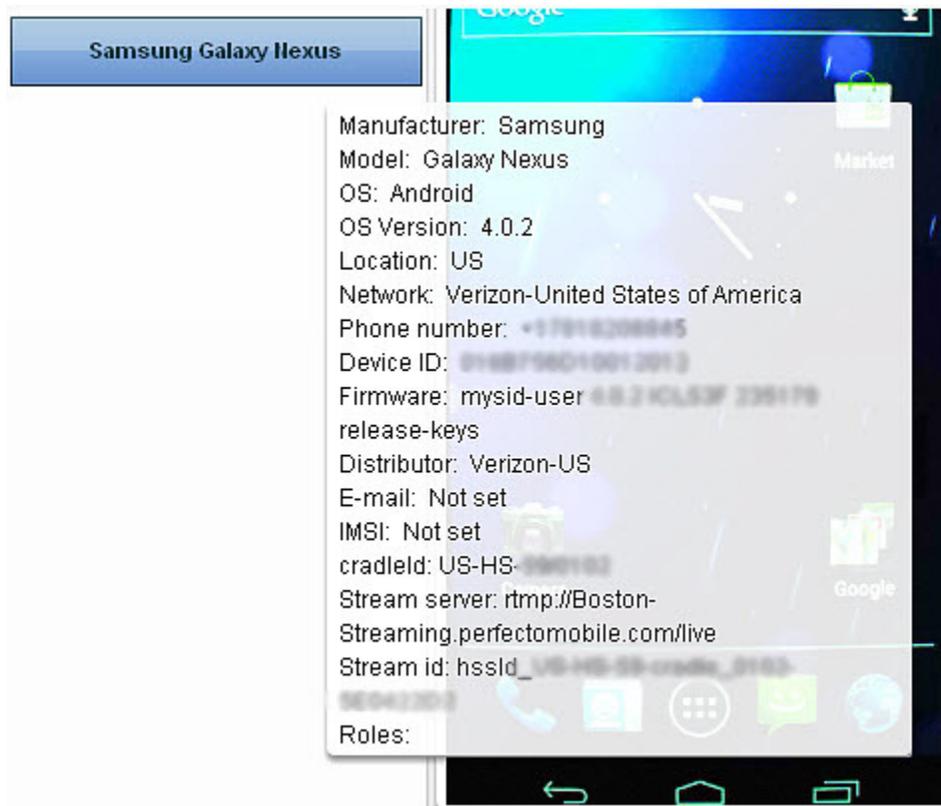

Show application menus - displays the application menu located at the top right side of the screen. Included are the *Settings*, *Help*, and *Log out* options.

Device Menu

It is possible to rotate, change the size, pause, get information, get the device link, and close each device on the device dashboard.

Device Details

Device details can be viewed by placing the mouse over the desired device name in view options.

The screenshot shows a device dashboard with a blue button labeled "Samsung Galaxy Nexus". A popup window displays the following details:
