

Latest updates

This section lists updates delivered since the [last major release](#).

[Support for iOS 14.5 RC](#) | [Reporting enhancements](#) | [Perfecto Gradle plugin](#) | [Passcode limitation on Android devices](#) | [Cypress support](#) | [Support for Chrome 90 Stable](#) | [Support for Edge 90 Stable](#) | [Support for iOS 14.5 Beta 8](#)

Support for iOS 14.5 RC

Support for iOS 14.5 RC is now available, with the following Apple limitation: Connecting to an application's UIWebView crashes the application, even when accessed through the Safari developer menu. The [limitations](#) of iOS 13 versions still apply.

Reporting enhancements

Added support for opening a device directly from the single test report by clicking the open device icon  in the report header. This allows you to quickly reproduce functional failures with the same platform capabilities or configurations (such as device model, OS type and version, location, screen orientation, or background apps) as the original test.

If the device is in use by another user, you have too many devices open, the device fails to open, or your cloud requires a reservation to open a device, Perfecto displays relevant messages and links to assist you.

Perfecto Gradle plugin

Updated the [Perfecto Gradle plugin](#) to version 21.5.

Passcode limitation on Android devices

If an Android device that requires a passcode is rebooted, Perfecto removes the passcode on restart to be able to reconnect the device, but the device still displays the passcode screen, and entering the passcode subsequently fails. This is a known limitation that will be resolved in a future release.

To overcome this issue, perform one of the following workarounds:

- Before rebooting the device, disable the screen lock.
- After rebooting the device, press the device's power button repeatedly, until the lock is released.

Cypress support

Added support for Cypress 6.8.0 (instead of 6.7.1) and 7.0.0.

Support for Chrome 90 Stable

Google Chrome 90 Stable is now supported on Windows and Mac machines.

Support for Edge 90 Stable

Microsoft Edge 90 Stable is now supported on Windows 10 machines.

Support for iOS 14.5 Beta 8

Support for iOS 14.5 Beta 8 is now available, with the following Apple limitation: Connecting to an application's UIWebView crashes the application, even when accessed through the Safari developer menu. The [limitations](#) of iOS 13 versions still apply.
